Click on Choose File and browse the zipped file dk-pdf-generator.zip and click on Install Now. Once installed, click on Activate Plugin.

Install and activate DK PDF

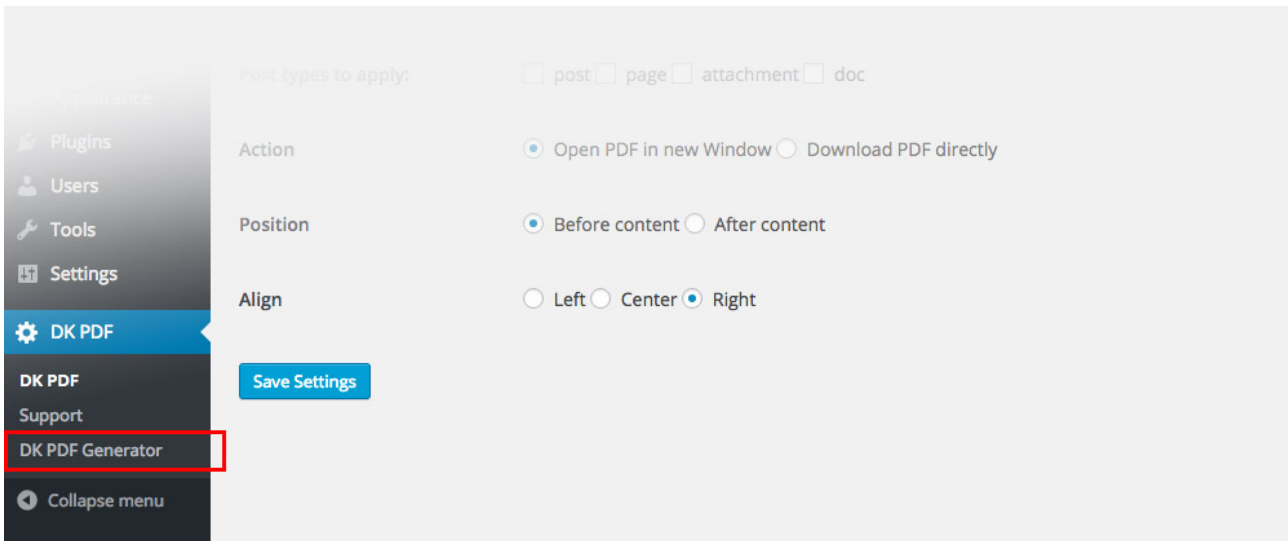

DK PDF Generator is an extension (addon) of the free [DK PDF Plugin](#), install and activate it.

The screenshot shows the WordPress Plugins management interface. A notification banner at the top states: "DK PDF Generator requires the following plugin: [DK PDF](#)." Below the banner are two links: "Begin installing plugin" (highlighted with a red box) and "Dismiss this notice". The main content area shows a table of installed plugins with the following details:

Plugin	Description
<input type="checkbox"/> DK PDF Generator Deactivate Edit	Generate PDF documents with your selected posts, pages and custom post types. Version 1.0 By Emili Castells Visit plugin site
<input type="checkbox"/> Plugin	Description

Once activated, the DK PDF menu will appear in the admin.

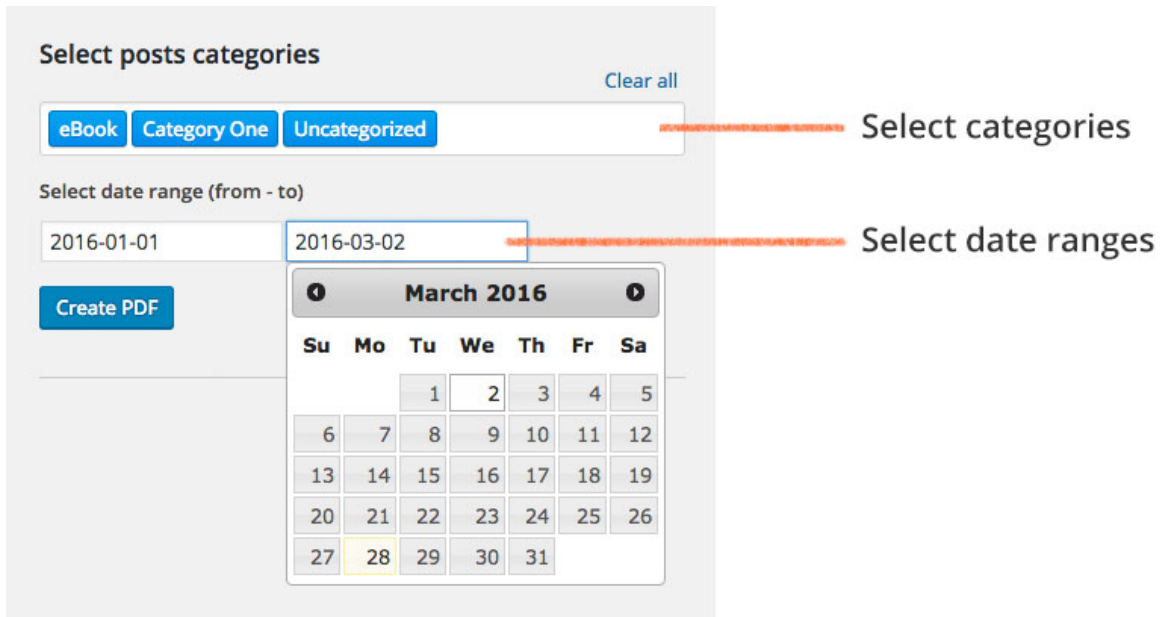

The screenshot shows the settings page for the DK PDF Generator plugin. The left sidebar menu includes "DK PDF" (highlighted) and "DK PDF Generator" (highlighted with a red box). The main settings area includes:

- Post types to apply: post page attachment doc
- Action: Open PDF in new Window Download PDF directly
- Position: Before content After content
- Align: Left Center Right
- A "Save Settings" button is located at the bottom left of the settings area.

Selecting WordPress content

Select categories with date ranges

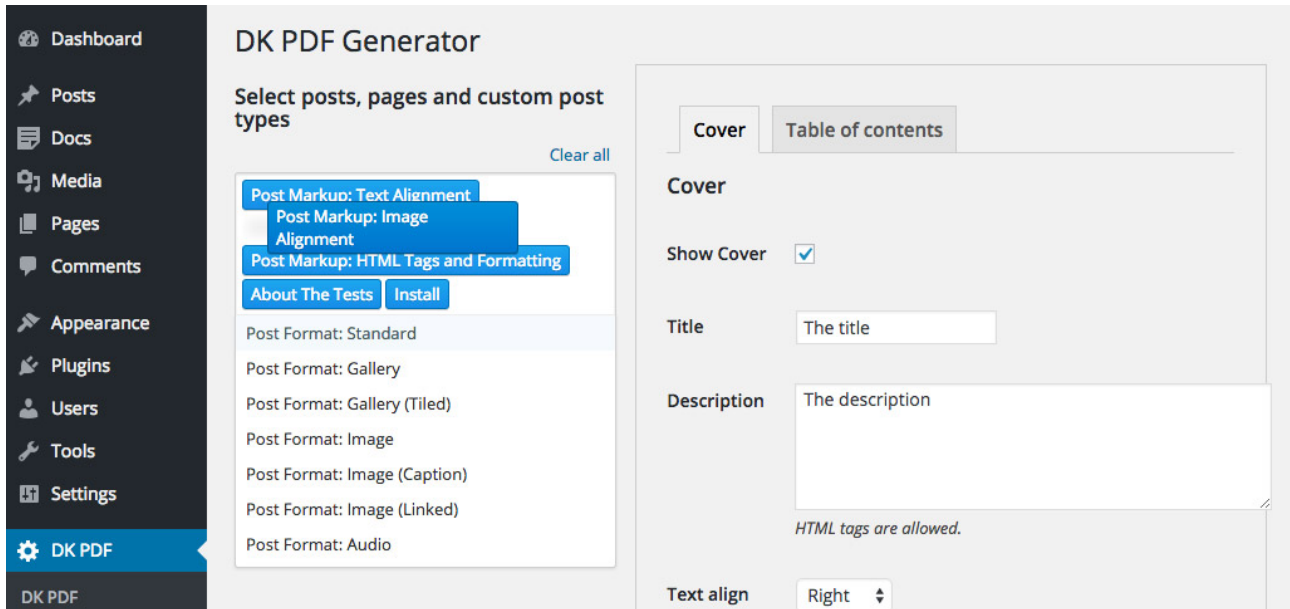

The screenshot shows a user interface for selecting posts categories and date ranges. The 'Select posts categories' section has a 'Clear all' link and three selected categories: 'eBook', 'Category One', and 'Uncategorized'. The 'Select date range (from - to)' section shows a date range from '2016-01-01' to '2016-03-02'. A calendar for March 2016 is displayed, with the date '28' highlighted. A 'Create PDF' button is visible on the left side of the interface.

Select categories

Select date ranges

Version 1.3 adds the ability to select whole categories and date ranges, by default the last 30 days are preselected.

Select posts, pages and custom post types

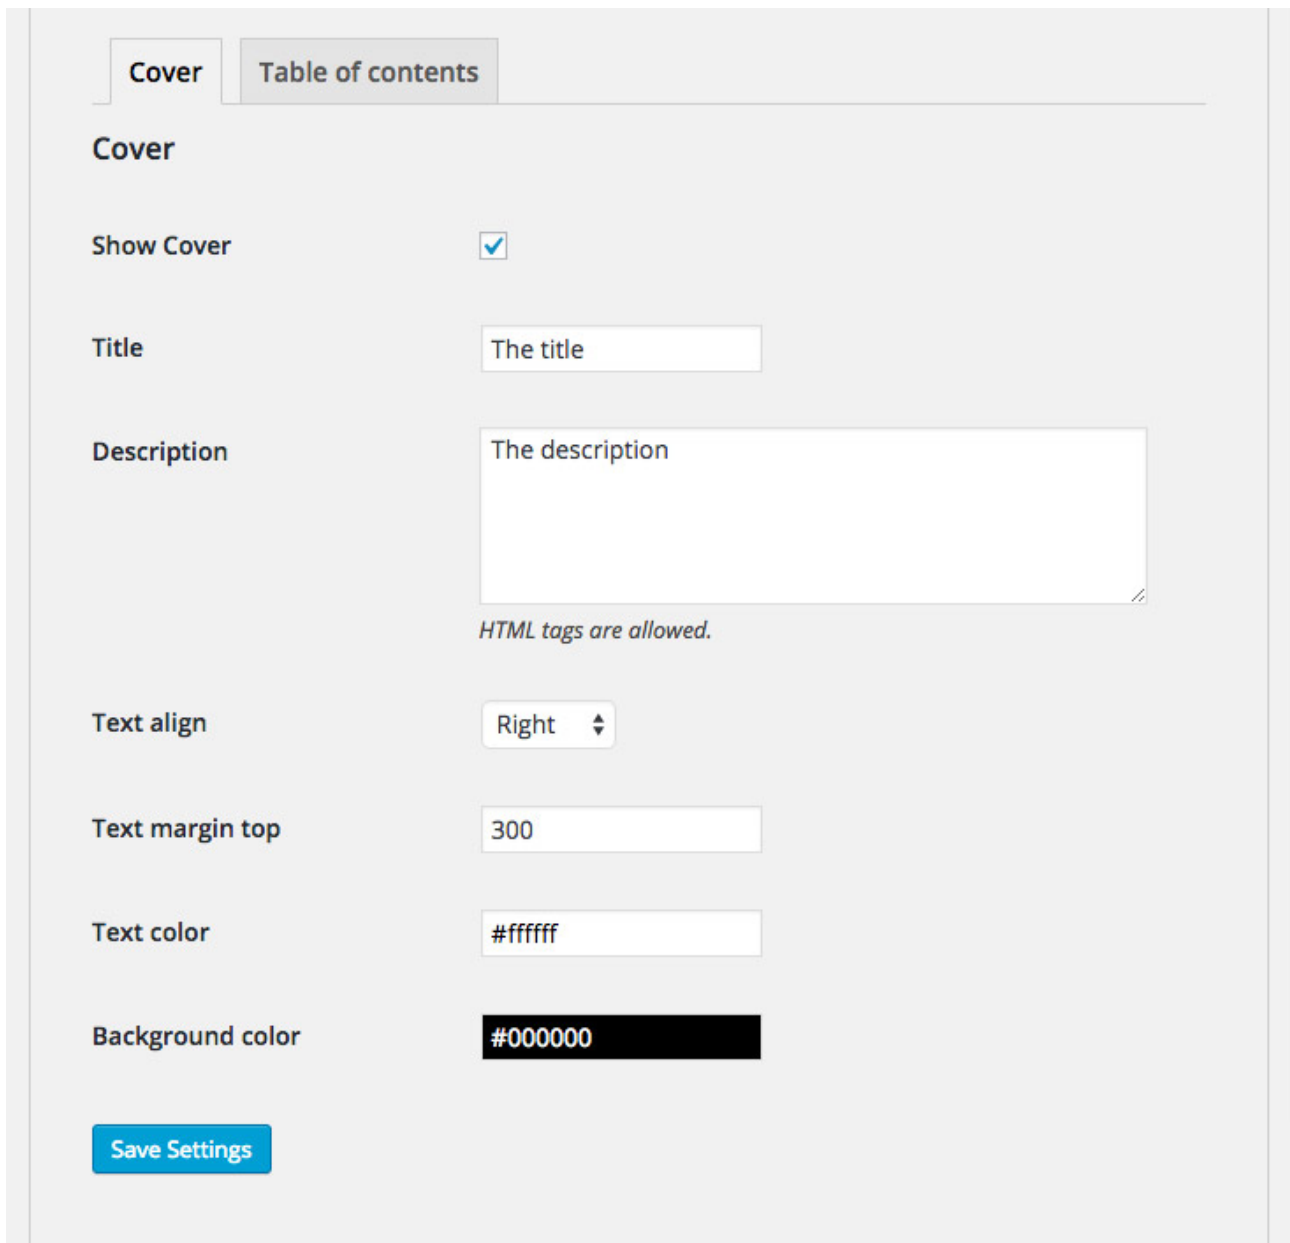

The screenshot displays the DK PDF Generator dashboard. On the left is a dark sidebar with navigation links: Dashboard, Posts, Docs, Media, Pages, Comments, Appearance, Plugins, Users, Tools, Settings, and DK PDF (highlighted). The main content area is titled 'DK PDF Generator' and 'Select posts, pages and custom post types'. It features a 'Clear all' link and a list of post formats: Post Markup: Text Alignment, Post Markup: Image Alignment, Post Markup: HTML Tags and Formatting, About The Tests, and Install. Below these are various post format options: Standard, Gallery, Gallery (Tiled), Image, Image (Caption), Image (Linked), and Audio. On the right, there are tabs for 'Cover' and 'Table of contents'. The 'Cover' tab is active, showing settings for 'Show Cover' (checked), 'Title' (The title), and 'Description' (The description). A note states 'HTML tags are allowed.' and a 'Text align' dropdown is set to 'Right'.

Also you can continue using Select posts pages and custom post types, useful for adding pages and custom post types before post categories.

PDF Cover

Creates the Cover of the PDF, you can configure title, description, background color, text color and text position.

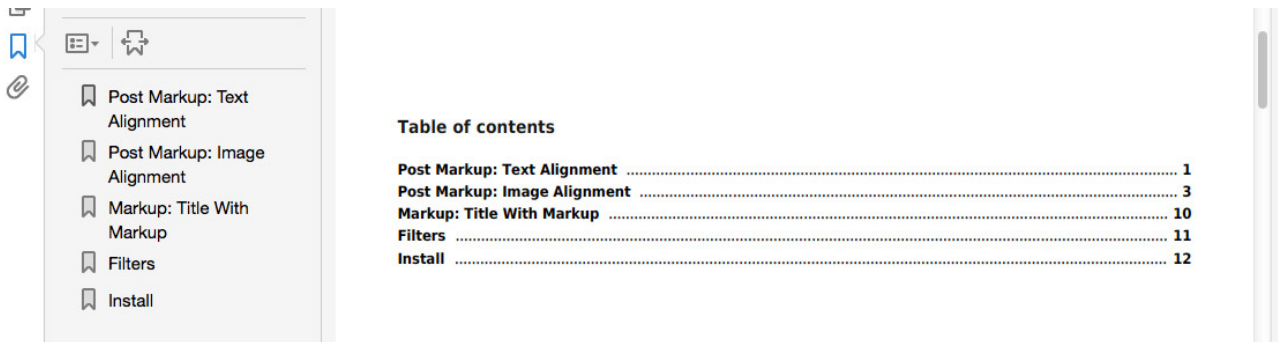

The screenshot shows the 'Cover' settings panel in the DK PDF Generator. It features two tabs: 'Cover' (active) and 'Table of contents'. The 'Cover' section includes the following settings:

- Show Cover:** A checked checkbox.
- Title:** A text input field containing 'The title'.
- Description:** A larger text area containing 'The description'. Below the text area, it states 'HTML tags are allowed.'
- Text align:** A dropdown menu set to 'Right'.
- Text margin top:** A text input field containing '300'.
- Text color:** A color input field containing '#ffffff'.
- Background color:** A color input field containing '#000000', which is visually represented by a black rectangular swatch.

A blue 'Save Settings' button is located at the bottom left of the panel.

PDF Table of contents

Creates a Table of contents (TOC) with linkable items.

PDF showing bookmarks and Table of contents page.

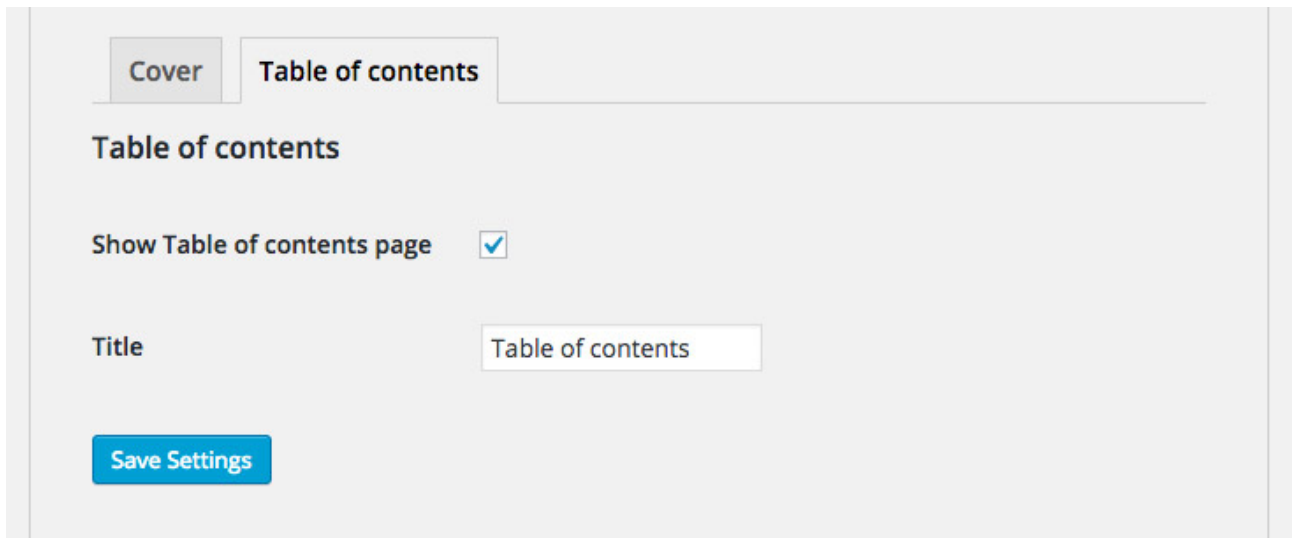

Table of contents options.

How to use DK PDF Generator templates in your Theme

The template files can be found within the `/plugins/dk-pdf-generator/templates/` directory.

Override templates in Theme

You can customize DK PDF Generator template files in an upgrade safe way through overrides. Simply copy the desired templates into a directory within your theme named `/dkpdfg`, keeping the same file structure.

Example:

```
Copy plugins/dk-pdf-generator/templates/dkpdfg-  
index.php  
to themes/your-theme/dkpdfg/dkpdfg-index.php
```

Override templates in Child Theme

DK PDF Generator allows override templates in Child Themes too.

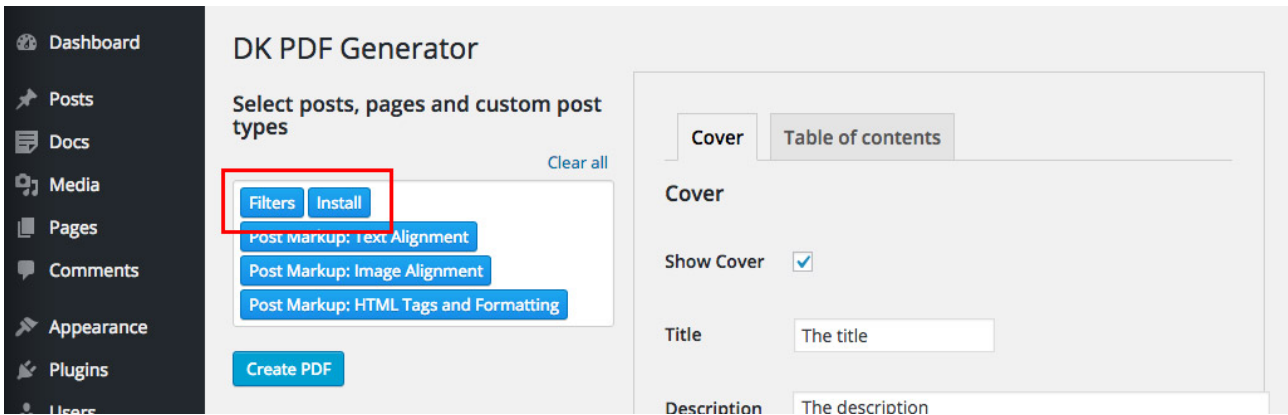

Example:

```
Copy plugins/dk-pdf-generator/templates/dkpdfg-  
index.php  
to themes/your-child-theme/dkpdfg/dkpdfg-  
index.php
```

Filters

dkpdf_posts_arr

This example shows how to reorder post types in the search box, moving custom post type `doc` at the beginning.

View the code on [Gist](#).

Tablepress plugin compatibility

By default, Tablepress plugin not work with DK PDF generator because TablePress does not register its Shortcodes in the admin area. To solve this you've to add this code to your theme functions.php

View the code on [Gist](#).

Thanks to Tablepress author, [more info here](#).
